

## WELWYN DATA CENTRE PHASE 1

**ASME** fabricated and erected 180 tonnes of structural steel framework for Data Centre in Welwyn Garden City. The steel structure needed to be set out using the old existing building as guidelines, requiring careful planning so that a precise setting in the absence of proper guidelines could be achieved. The entire project was strictly monitored to ensure the guidelines Skanska had implemented, were being met. Phase 1 has now been successfully completed within deadline and we are looking forward to phase 2.

**Contract value:** £900,000

**Location:** Welwyn Garden City

**Duration:** 3 Months
