

BARTHOLOMEW LANE, LONDON

The project in Bartholomew Lane contracted **ASME** to install Rakers and Walers to support two floors of underground basement, whilst demolition work took place elsewhere in the building.

ASME supplied and installed 50 tonne of temporary steelwork. The project was challenging, working in the lower basement 15m below ground floor level and working in water due to the depth of the basement. Regular site meetings with the demolition contractors took place throughout to ensure continued safe working practice.

Contract value: £216,000

Location: Bartholomew Lane, London, EC2R

Duration: 4 Months
