

BASINGHALL AVENUE, LONDON

ASME Engineering were contracted to install steel platforms as part of an Arts project. The office block, based in Basinghall Avenue required steel platforms in order to display their sculptures in the office block atrium.

The work was carried out using a spider crane, which entered the building via the lift access. Access was limited due to the restrictions of the small work area, work needed to be carried out after work hours, due to the building being live. The job was completed well within the given time frame and achieved on budget.

Contract value: £180,000

Duration: 3 Months

Location: Basinghall Avenue, BC2V
