

ADELPHI HOUSE, LONDON

ASME supplied and installed a feature staircase in the office foyer of a London based office as part of a complete office refurbishment.

ASME managed this complete project, from working with the Architect on the hi-spec design, through to sourcing, fitting and building every element of the bespoke staircase manufactured from mild steel frame, glass balustrade, polished steel handrail and stainless steel cladding.

Throughout the project, second floor access was minimal and therefore required careful planning in order to successfully carry out the work in the confined space. Due to precise engineering and good quality control, we managed to complete the project well within the time frame given.

Contract value: £96,000

Location: Amerada Hess, WC2

Duration: 8 Months
